

Task: Create a simple responsive content landing page with a hero carousel and 3 card components.

Code Requirements:

Use only HTML, Vanilla JS, and CSS/SCSS **NO LIBRARIES**

Place all JS/CSS and Images in a resource folder.

For images, you can use icons or stock images.

CTAs in the cards can just be relative anchors pointing to “#” For layout and positioning, use FLEX.

The hero Carousel should operate by clicking the nav buttons on the bottom and should advance to the next Or previous image on click.

Commit all work to a public Git repository:

- **Optional:** Special credit for showcasing Git operation skills, use of appropriate branching structure (ability to merge), code review, etc.

Things to keep in mind:

Less is better, so keep it simple and clean.

When Done: Push final changes to your Git repo. Include appropriate high level details or any critical call-outs in your ReadMe file.

Submit repo link directly to: tech@courtavenue.com

- Title Email with CA-DEV-TEST - [Your Name]

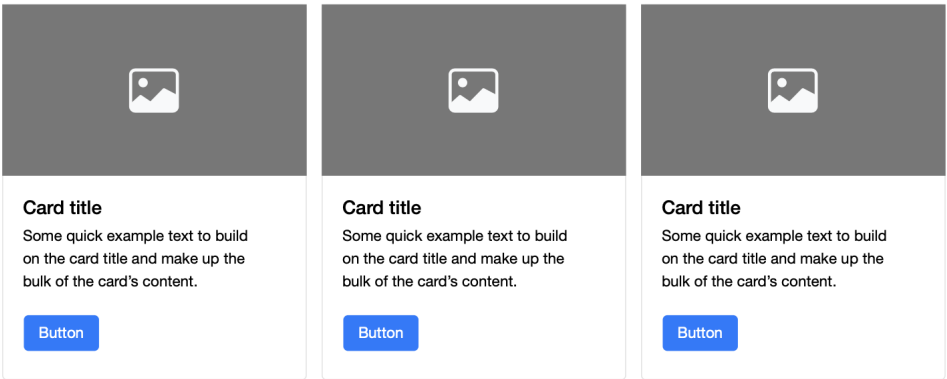

ETC: Submit within 2 business days from receipt of email
